1.1. Deactivate / activate user	-----	3
1.2. Multiple login issue	-----	6

INTRODUCTION

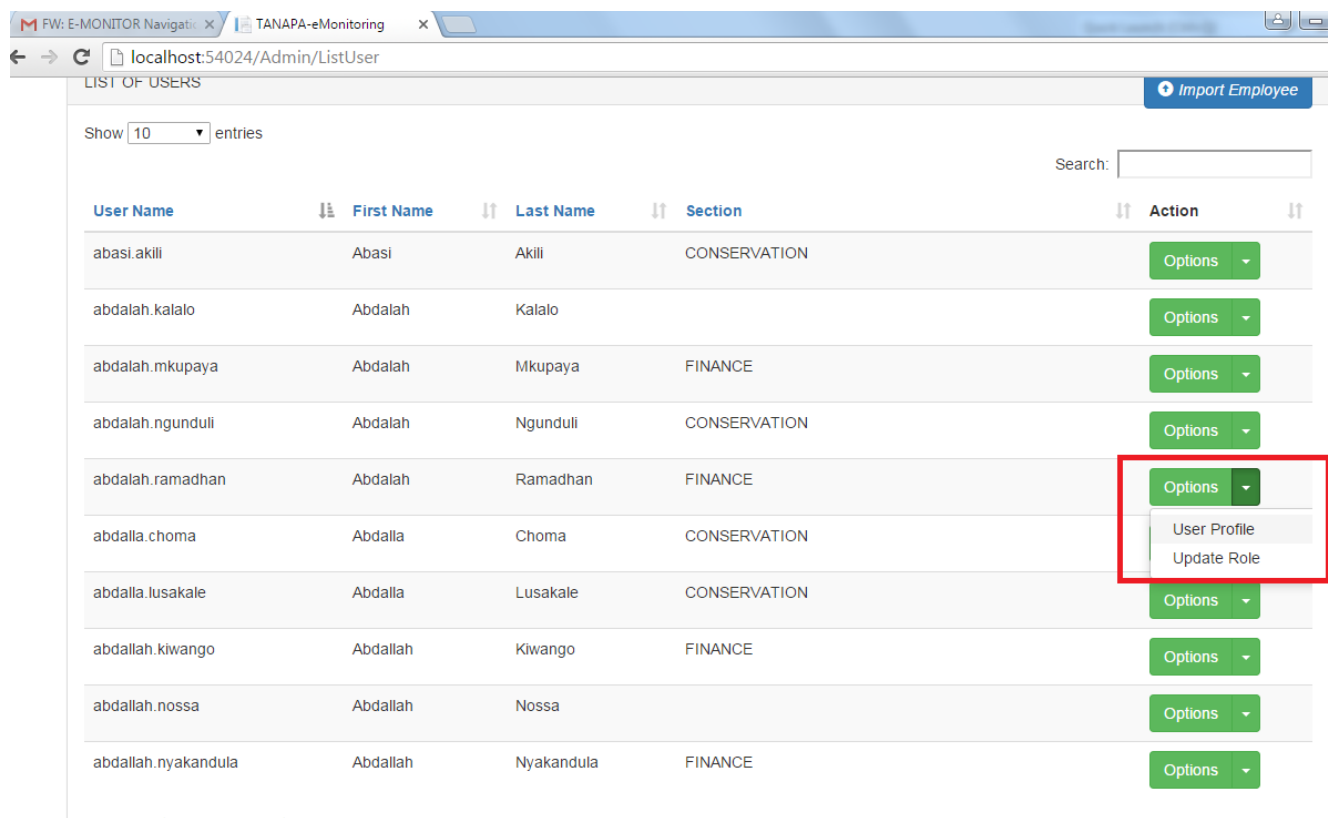

The e-Monitoring system has been updated referring comments and evaluation. Although the updates/changes is still going on I have write this progress report to point the changes/ updates so that you can still review and referring your previous comments.

1.1. DEACTIVATE / ACTIVATE USER

The system now allow user deactivate and activate. This feature now is performed by system administrator although you can either decide to be performed by another entity in the system. The feature is working as follow:

1. Administrator login to his/her dashboard and click USER menu at top right of the dashboard.
2. On list of users under options click “User Profile”.
3. On the User details page appear there either red or green button at the bottom right of the page. If the user Status is Deactivated the green button will be visible, Thus admin can click and re-activate the user again. When user status is Active the red button will be visible to allow admin to deactivate user.
4. When user is inactive cannot login to the system

The following screenshots illustrate this feature:

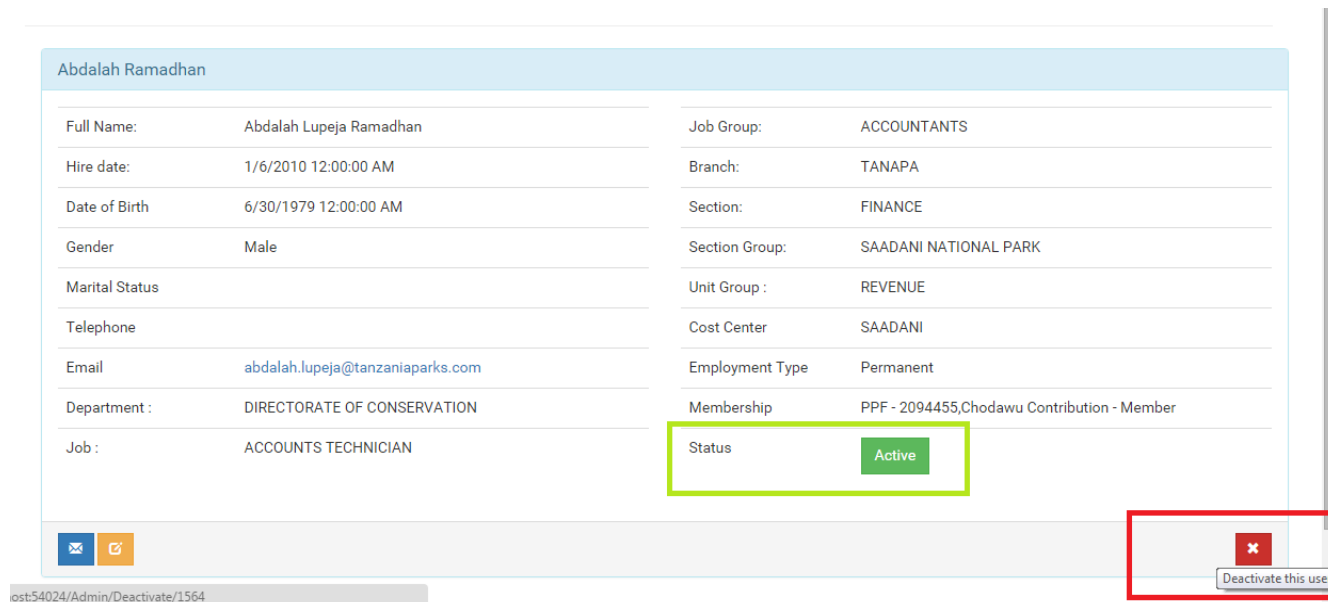

LIST OF USERS

Show 10 entries

Search:

User Name	First Name	Last Name	Section	Action
